Math Test for Medication Administration

• The passing grade for the Math Test for Medication Administration (MTMA) is 100%.
• Each semester a student is enrolled in a course with a clinical practicum, a student must pass the MTMA with a grade of 100% in order to administer medications and/or IV fluids in the clinical setting, which are required elements to pass the course(s).
• The MTMA will be administered utilizing ATI.
• Students enrolled in more than one course with a clinical practicum will be required to take only one MTMA that semester. Successful completion will be required to administer medications and/or IV fluids in all clinical practicums that semester, not just in the course where the test was administered.
• For Fall semester Juniors and Spring semester CEIN/BS, students have two attempts during the semester to take the MTMA and achieve a grade of 100% with no penalty. For all subsequent semesters, students have one attempt during the semester to complete the MTMA with a grade of 100% with no penalty.
• When a student does not achieve a grade of 100% on any MTMA attempt, structured remediation with an UConn faculty, teaching assistant or graduate assistant is mandatory. The student must receive faculty approval for a MTMA retake. It is suggested that the student utilize study materials before each MTMA.
• When a student does not achieve a grade of 100% after the specified number of attempts, 15 points will automatically be deducted from the clinical evaluation tool (CET) final grade percentage. For each subsequent MTMA that is not passed, an additional 15 points will be deducted from the CET final grade percentage until the student’s CET grade is C- or less.
